

# New line in toolholders

D'Andrea S.p.A, a world leader in precision machine tool accessories, present MONOd' - a new line of monobloc toolholders.

MONOd' is an addition to the well-known modulhard'andrea and Toprun toolholder system, and represents the perfect solution for all machine tool equipment.

The MONOd' toolholder system is completely manufactured by D'Andrea and, thanks to improvement in manufacturing cycles, can guarantee users an excellent quality and a remarkable level of precision - all arbors are manufactured at AT3 tolerance - together with a highly competitive market price.

The complete range for DIN 69871 and MAS-BT spindles, sizes ISO 40 and 50, includes ER collet chuck holders, WD Weldon toolholders, PF shell mill holders, MS tapping toolholders and CM morse taper toolholders in different lengths. D'Andrea is known worldwide for the production of modulhard'andrea, a modular system of high precision toolholders and Toprun, the balanceable monobloc toolholder line.

The flexibility and simplicity in using MHD' supplied in eight sizes, makes it the perfect solution for all boring, milling, drilling and tapping tooling.

The Toprun toolholders are particularly appropriate for high speed machining.

For years D'Andrea has also been producing Sensitiv T-TA, Autoradial, U-Tronic and U-Center boring and facing heads. The medium and large-sized NC U-Tronic heads can be applied manually, automatically and with palletized systems, on boring machines, machining centres and special machines. The CN U-Center heads are ideal for machining centres and special machines. Both carry out, undercut, interior and exterior facing tooling, conical and cylindrical boring and threading, convex and concave spoke shaves.

SUPPLIES PTY LTD

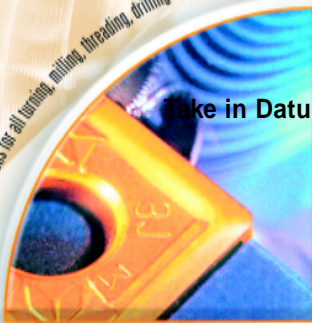

## All The Pieces You Need...

Datum Engineering Supplies has been servicing Australian metal cutting workshops for over a decade. Sourcing only quality products from leading manufacturers, Datum delivers a complete range of solutions, combined with real industry experience to support its customers

Carbide metal cutting solutions for all turning, milling, threading, drilling and grooving applications

Take in Datum

Drills, End Mills, Counterbores, Reamers, Taps in HSS, HSSC and ASC

High quality boring, turning and facing heads and high precision machine spindle accessories

Leading manufacturer of solid carbide tools using famous PVD technology
